The Project

Hypothesis

User will be able to present data collected and verified by organisations such as Local Authorities as part of their verification with an Identity Provider. This will help improve IDPs’ coverage.

This project explores:
• Could a user present data collected and verified by a micro-source as part of GOV.UK Verify?
• Could an aggregator collate data from micro sources of data to be used by Verify?
• Could Etive act as a micro source aggregator collating data from multiple different sources which the user would be willing to present?

In addition the project has explored the perspective of the user, in this case social housing tenants:
• Is the tenant happy for their housing data to be used as part of the GOV.UK Verify process by an Identity Provider?
• Does the tenant see benefit in using a digital identity when accessing their Local Authority or Housing Provider?
Data gap

People in lower socio economic groups less likely to have a credit file which the IDPs can use for Activity History.

Plugging the gap

**English housing survey 2014 to 2015: social rented sector report**

- 17% of all households in England live in social sector housing. This equates to 3.9 million households.

- Of these 3.9 million households, 42% rent from local authorities. This equates to 1.6 million households renting from their local authority.

- Ages are spread out but primarily over 25 with the largest groups aged 35-54. Full breakdown in the first table below.

- Most households are 1 individuals (41.2%) or 2 individuals (23.7%).

- Households often consist of a couple (11.2%), couple with dependent child (15.6%) or lone parent with dependent child (17.9%).

- Most are in full-time work (27.3%) or retired (30.5%). A further 9.4% are recorded as unemployed.

- The majority of have low income based or weekly income. 47.8% fall into the first quintile (lowest income), 27.4% into the second and 17.2% in the third quintile.
Table below is volumes of social housing tenants in the Tower Hamlets borough based on census data completed by residents for everyone in the property.

*2011 Census Data*
Role of the DLB as an aggregator

- Specialises in Housing Tenants
- Offers a way for tenants to hold their data and then assert or share it with whom they choose.
- Already creates data feeds with HAs and LAs – i.e. data is already accumulated.
Quality of Data

On boarding process was observed by GDS.

Through the course of the social housing application and tenancy there are clear ‘events’ that are likely to be recorded against the customer record in Tower Hamlets Homes’ data. In the application process there are several events where a degree of identity checking takes place, including:

• Initial application
• Visiting properties
• Bidding for properties – login/password
• Completing the application
• Collecting keys

Similar events during the tenancy could include: requesting repairs, visits by the Housing Officer and moving property.
## Use Cases

<table>
<thead>
<tr>
<th>Use of Micro-Source data</th>
<th>Summary</th>
<th>Examples</th>
<th>GDS Review</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tenancy event activity history (Element E)</td>
<td>The various social housing ‘events’ could provide activity history if sufficient data is gathered by the micro-source and could be presented to the identity provider.</td>
<td>• Bidding for properties • Requesting repairs • Visits by Housing Officer • Inspections</td>
<td>• Medium</td>
</tr>
<tr>
<td>Digital Log Book activity history (Element E)</td>
<td>Use of the Digital Log Book could provide additional lower quality activity history to supplement the events. There would be conditions on when this could be countered and on ensure suitable authentication.</td>
<td>• Logins • Updating details • Adding evidence/data</td>
<td>• Low – potential to rise if 2 fact authentication added to login process.</td>
</tr>
<tr>
<td>Knowledge based verification questions (Element C)</td>
<td>The ‘events’ could provide the data for knowledge based verification (security) questions that only the customer should know.</td>
<td>• Start date of tenancy • Monthly rent cost • Address history • Recent Repairs • Date of visit from Housing Officer</td>
<td>• Medium</td>
</tr>
<tr>
<td>Identity evidence for the living category (Element A/B)</td>
<td>Verify users must present evidence across 3 categories: money, living and citizen. Social Housing data could be used for the ‘living’ category to level 2.</td>
<td>• User presents evidence they are a tenant in a form that can be checked by the identity provider.</td>
<td>• Potential if LBTH make recommended changes.</td>
</tr>
</tbody>
</table>
GDS Recommendations

• Further Analysis
  • Better understanding of events and how they are created
  • Better understanding of viability for IDPs
• Formalise ID checks
  • Increase training for staff
  • Ensure time restraints do not affect checks
  • Consider capturing a photo at initial on boarding
• Review Accepted Guidance
  • No. of current accepted docs are difficult to authenticate
  • Accepted list should be minimised
• Improve Authentication
  • DLB should have 2 factor authentication
  • Use Good Practice Guidelines 44 for guidance on authentication.

* For London Borough of Tower Hamlets to change current processes and implement recommendations a business risk review should be undertaken to understand cost and time implications verses the benefits of a digital identity.
What the customer thinks
